Use database

Apply advanced searching techniques:
• Use synonyms with “Boolean operator” OR (e.g., computers OR technology)
• Use “Boolean operator” AND to combine unlike ideas
• Use options and give examples from your research question/problem statement:
  • truncation to get different forms of a word (e.g., comput*) or wild cards (e.g., wom*n)
  • quotation marks for phrases (e.g., “information technology”)
  • date range: ________________________________
  • language/s: ________________________________
  • other (list): ________________________________

From the results, list the subject headings for each keyword:

______________________________________________________________________________
______________________________________________________________________________
______________________________________________________________________________

Revise search: use subject headings or terms as phrases with the drop-down menu at the end of the search box
