To add “Journal of Forestry” citation style to Zotero:

Here is the example of a journal citation given to authors for the Journal of Forestry (which, as it turns out, is identical to the Forest Science journal, also published by the American Society of Forestry):

**Journal of Forestry/ For. Sci example:** [https://www.safnet.org/publications/jof/guideforauthors.cfm](https://www.safnet.org/publications/jof/guideforauthors.cfm)

The Journal of Forestry and Forest Science journal, both published by Amer. Society of Forestry, use the same citation style for journal articles, and Forest Science is available in Zotero. There is one issue with the way the citations are produced; the article titles are in “title case,” (each word capitalized) as opposed to “sentence case” (only the first word capitalized); you want the latter.

Example:

**Zotero “Forest Science:”**

**Changed title to sentence case in Zotero:**

To summarize what you need to know to use Zotero for these citations:

1. To add Forest Science citation to your list of styles in Zotero:

Open Zotero (from downloaded version, not web version), and click on the “gear” symbol shown below, and choose “Preferences:”
2. In Preferences, choose “Styles” tab, and click “Get additional styles…:” From there, you can search for “Forest Science”. Then it will ask if you want to save that style to your repository.

3. Once that style is installed, to change it to sentence case as opposed to title case, click on titles in your library you wish to change.

As shown above, in the right box on the screen that lists all the metadata for the article, right-click (or control-click on Mac) on the title, and “Transform Text” will pop up, and just choose sentence case.

Voilà! When you create a bibliography from these titles, they will be in the proper format.
